

Next Generation Security

Instantly Connect Every Safety System in Your School

Smarter, Faster Emergency Response for Schools

Today's school districts face unprecedented challenges in ensuring campus safety. Despite substantial investments in systems — from cameras to access control systems — one critical issue remains:

DISCONNECTION—when systems don't work together, your most valuable asset—time—is lost.

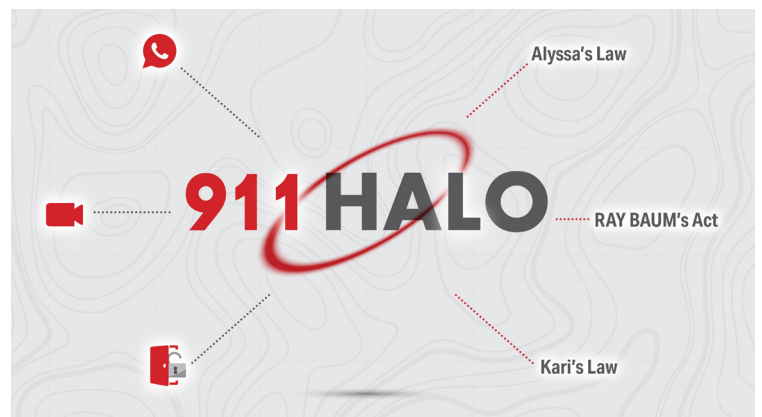

Launch Phase One with **911 HALO**, powered by 911inform—a centralized emergency management hub that seamlessly integrates your district's disconnected security systems into one unified, real-time, life-saving solution. During an emergency, all separate systems are visible through a single pane of glass—no separate apps, logins, or passwords required. Instantly access and control everything from your mobile device.

Unify Disconnected Security Systems into a Seamless Emergency Response Network.

911 HALO unifies your security systems, delivering real-time situational awareness and operational control to school administrators and first responders. During emergencies, you communicate in real-time—enabling critical, life-saving decisions to be made in seconds rather than minutes.

Key Benefits

- **Geo-guided Access for First Responders & School Administrators**
 - » Instantly pinpoints 911 call locations—even from mobile phones
 - » Guides responders to the nearest building entrance via Google Maps
 - » Eliminates delays caused by unclear layouts or entry points
- **Instant Situational Control**
 - » Text alerts to mobile devices enable control of door locks, live video from cameras, and PA systems—**no app or login required**
 - » Reduces response time, enhances containment and provides real-time communication
- **Maximize Your Security Investments Value**
 - » No need to rip and replace—integrates with your current systems and automates safety plans
 - » Reduces cost, complexity, and training overhead
 - » Supports and exceeds federal requirements (Kari's Law, Ray Baum's Act, Alyssa's Law)

In a crisis, every second matters. **911 HALO** maximizes its life-saving value by accelerating response times, automating your safety protocols, and strengthening collaboration between schools and law enforcement.

Next-Gen Security: Early Threat Detection

Now imagine stopping threats before they even begin. Phase Two of our solution introduces **Early Threat Detection**, powered by millimeter-wave technology that detects concealed weapons **before** entry—without alerting the perpetrator.

This non-invasive system offers:

- **Proactive Threat Identification** – Recognizes potential threats before they enter your buildings
- **Seamless Integration** – Pairs with **911 HALO** to maximize unification with your other systems
- **AI-Driven Alerts** – Real-time insights for your safety teams and law enforcement
- **Privacy-Focused Design** – No invasive searches; internal cameras display optical imaging only, preserving privacy
- **Public Display Interface** – Standard optical feed with AI-generated overlays to pinpoint threats discreetly and effectively

Now is the time to take proactive steps to safeguard students, teachers and staff, automating safety protocol and ensuring real-time communications during emergencies. With **911 HALO** live today and our Early Threat Detection launching soon, your district can deploy a comprehensive safety solution that saves lives and restores peace of mind.
