

# Top Must-Have Security Tools for Every School District

Cybersecurity can be overwhelming with so much tech. Here are the top tools every district should prioritize right now to protect student data, recommended by our Chief Security Officer.

**Meet Adam**  
Chief Security Officer

1

## Endpoint Detection & Response (EDR)\*

Real-time monitoring and automated responses, integrated with EDR solutions like Crowdstrike or Defender, swiftly protect critical systems such as laptops and servers by detecting and stopping sophisticated threats.

2

## 24/7 Monitoring\*

Who's there to respond at 3 am? Round-the-clock cybersecurity monitoring is essential for school districts to promptly detect and respond to cyber threats.

3

## Next-Gen Firewalls for Networks

Using advanced security features to protect networks from complex attacks, ensure safe and open internet access for learning without needing to secure every device individually.

4

## Email Account Security\*

Combat cyber threats like phishing and malware, using anti-phishing, attachment sandboxing, and DLP to prevent malicious emails from reaching students and staff to reduce data breach risks.

5

## Offline Backup Solutions for Data Recovery

Keep the learning going by enabling data recovery from cyberattacks or failures, using secure, automated, and encrypted off-site backups.

6

## Incident Response Retainer\*

Get back to class faster. Enable quick identification, isolation, and mitigation of cyber threats for a rapid recovery to normal operations with recommendations to better security posture.

\*included with our MDR service.
