

Miller Copilot Welding System Auto-Continuum 350

This entry-level welding cobot was designed for intuitive ease-of-use for welders of all skill levels that are new to robotic welding. It includes advanced features to tackle more challenging welding applications. AccuGuide positioning control allows the welder to fine-tune the position of the torch during programming instead of only using the free-jogging feature of the cobot. IntelliSet setting management system reduces the steps required while programming by simplifying the process of choosing or revising settings. Multipass welding is a technique used in welding processes where a weld joint requires more than one pass to achieve the desired weld size, strength and quality. This method is often employed in applications where the joint thickness is greater than what can be effectively welded in a single pass.

Hobart MIG Handler 140EZ Welder, 115V

Operates on 120-volt power with a broad output range of 30-140 amps. It welds as thin as 24 gauge and up to 3/16" in a single pass. Weld thicker materials with multiple passes and proper material prep. Infinite voltage control and EZ Mode™ make setup and producing better welds easier on different materials and thicknesses. Fine tune the settings anywhere between 1-10 creating less spatter and cleaner welds with infinite voltage control or quickly change parameters with two turns of a knob with EZ Mode. Spool hub accommodates 4" and 8" spools and wire is fed into a rugged, angled drive assembly for quick and easy setup. Quick Select™ drive rolls offer 3 grooves: 2 for different sizes of solid wire and a third for flux-cored wire.

Milwaukee M18 FUEL 5-Tool Combo Kit

Includes

M18 FUEL™ 1/2" Hammer Drill/Driver
M18 FUEL™ 1/4" Hex Impact Driver
M18 FUEL™ SAWZALL® Recip Saw
M18 FUEL™ 6-1/2" Circular Saw
M18™ Work Light

2 M18™ REDLITHIUM™ XC5.0 Extended Capacity Battery Pack
M18™ and M12™ Multi-Voltage Charger
Side Handle
2 Belt Clip
Circular Saw Blade
Blade Wrench
Bag
